Horsemart tested...

I was looking for new bedding for my horse, as she is going to have to have a long period of box rest for most of this winter. With this in mind, I needed something that would be quick and easy to muck out, absorbent and also dust-free for my personal allergy issues.

A friend recommended Bed Soft Bio, so with my hard winter in my mind, I agreed to give this a try.

Since using Bed Soft, I have certainly wasted a lot less bedding than before, and most certainly have a clearly visible drier bed. As this is a bio-degradable product, this will reduce my muckheap considerably, not to mention the cost of having it removed.

I will most certainly be using this product in the future.

Our opinion...

We galloped home with:

-  Absorbent, easy to maintain
-  Great choice of bedding to choose from to suit individual needs

We fell at the first fence:

-  Nothing – wish I'd found this product sooner...

BedSoft Ltd is based at Frieze Hall Farm, near Brentwood, Essex.

BedSoft is produced using the straw grown on our own and neighbouring farms around Brentwood, keeping raw material, transport costs and our carbon footprint to a minimum!

The straw used in our quality bedding is first processed through a unique shredding and chopping machine, it is then treated with a state of the art dust-extraction method before the special BedSoft bedding treatment is applied!

All of the BedSoft bedding products receive the special BedSoft treatment, which has anti-viral, anti-bacterial and insect-repellant properties. The treatment leaves a bitter taste to discourage bed eating and this whole process is non-toxic, leaving the bedding with a welcoming lemon fragrance.
